## **ADR**

### **Tip of the Month**

---

---

### **A responsibility for all to report**

Reporting suspected adverse drug reactions (ADRs) in children is the responsibility of every physician prescribing medications for children, as well as every pharmacist, nurse and other health professional who provides advice and follow-up, for the following reasons:

- An absence of premarket evidence base for dosage and frequency.
- Special concerns for differences in childhood drug metabolism and interactions.

***Please report all suspected  
adverse drug reactions (ADRs).***
